

Landon Nguyen

Data Science | AI Engineering

Lmnguyen420@gmail.com | Little Elm, TX | (972) 632-6912 | [Project Portfolio](#)

SUMMARY

Data science student with 6 years of programming experience and 2 years applying statistical, data mining, and machine learning methods to research and solve data-driven problems. Combining AI engineering with data science to build intelligent and autonomous systems.

EDUCATION

The University of Texas at Arlington | Arlington, TX

August 2023 - December 2027

Dual-Track M.S. Applied Statistics and Data Science - B.S. Data Science | Biology Concentration | Minor in Mathematics *GPA: 3.9*

Current Coursework & Independent Studies: Statistical Analysis with SAS; Linear Algebra and Statistics with R — Independent studies: OpenAI Agents SDK, CrewAI, QLoRA

Upcoming Coursework & Independent Studies: Advanced Regression Analysis, Machine Learning Applications, Data Mining with Information Visualization — Independent studies: Agent Guardrails, LangGraph/LangChain, MCP, MLOps, Azure Databricks, Spark

Certifications: IBM Machine Learning with Python, IBM Machine Learning Methodology, PyTorch for Deep Learning

PROJECTS AND AI EXPERIENCE

DATA-4332: Undergraduate Capstone Project

- Curated, explored, and preprocessed data to analyze and predict infant mortality rates for Empowered Action Group states in India.
- Developed a preprocessing pipeline to address scarce data and high dimensionality; trained an artificial neural network achieving an R^2 of 0.86.
- Built a Streamlit deployment app that combines SHapely Additive exPlanations (SHAP), an explainable AI (XAI) technique, and agentic AI to generate solutions for reducing infant mortality.

DATA-4380: Data Problems

- Processed and augmented lung X-rays to diagnose COVID-19 or viral pneumonia.
- Fine-tuned a transfer-learning model, DenseNet201, to achieve a macro F1 score of 0.83 on a small image dataset.

LLM & Agentic AI — Independent Projects

- Built a multimodal chatbot integrating LLMs, image generation, and text-to-speech to simulate interactive stories.
- Used LLMs to translate Python code into C++ for performance-oriented processing.
- Implemented Retrieval-Augmented Generation (RAG) to provide business-specific context to LLMs.
- Built agentic applications using OpenAI Agents SDK, including a digital twin with RAG and an automated email workflow.

WORK EXPERIENCE

Mexican Bar Company: Busser | Expediter | Server | Bartender

2021 - Current

- Rotated across four front-of-house roles in a high-volume, fast-paced environment, sharpening attention to detail, prioritization under pressure, and clear communication across a team.

SKILLS

Languages: Python, SQL, R, SAS

Data Science: NumPy, Pandas, SciPy, scikit-learn, imbalanced-learn, Statsmodels, Matplotlib, Seaborn, Tableau

Machine Learning: Regression, Classification, Ensemble Methods, Dimensionality Reduction, Feature Selection, Imbalance Handling

Deep Learning & AI: TensorFlow/Keras, PyTorch, OpenAI APIs, LLMs, Agents SDK, RAG

Mathematics & Statistics: Hypothesis Testing, Multivariate Statistics, Nonparametric Tests, Linear Algebra, Calculus

Development Tools: GitHub, Jupyter Notebook, SQLite, Claude, Cursor
